Key Risks

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss.
The Fund is exposed to the currency markets which may be highly volatile. Large price swings can occur in such markets within very short periods and may result in your investment suffering a loss.
The Fund is exposed to less economically developed economies (known as emerging markets) which involve greater risks than well developed economies. Political unrest and economic downturn may be more likely and will affect the value of your investment.
Bonds are exposed to credit risk and interest rate risk. There is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. If interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment.
The Fund invests in non-investment grade bonds which generally have a higher risk of default and are more susceptible to market fluctuations. This could adversely affect the value of your investment.
The following is applicable if you subscribe for or settle shares in a different currency than the fund or share-class currency: Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies.

Reference Index key features

The J.P. Morgan Government Bond Index-Emerging Markets Global Div 10% Cap 0.25% Floor Index aims to represent the returns of investment grade and high-yield sovereign debt issued by the governments of certain emerging market countries issued in domestic currency

- Index components are market value weighted using the index administrator's diversified weighting methodology
- The diversified weighting methodology uses an adjusted face amount to calculate a country's weight, based on the respective country's relative size in the index and the average size of all countries
- Local currency denominated fixed coupon instruments
- Only bonds with greater than 6 months to maturity are included in the GBI-EM Indices. Bonds with less than 6 months to maturity are removed from the indices at rebalance date.
- The maximum weight of countries is capped at 10% and a minimum country weight floor of 0.25% is applied at each monthly rebalancing
